Abstract (en)  
[origin: EP0837207A2] The door panel part (5) is pivotably located on a door frame-side pin. A slide rail (13) is arranged on the holding part (4) or on the panel part and a slide rail accommodation (10) is arranged on the panel part or on the holding part. The holding part and the panel part-side slide rail (13) are displaceable in the slide rail accommodation along the horizontal direction of the door panel plane. In the vertical and thickness direction of the door panel plane the panel part-side slide rail can be fixed. The slide rail may be formed as an one piece on the holding part or on the panel part, as is the slide rail accommodation. The slide rail accommodation may have at least one projection (11,12), which can be brought into engagement with a recess (14,15) of the slide rail .
