Abstract (en)
[origin: EP0837433A2] The method involves generating a digital code of a message by joining text entries from a table. The message is decoded and displayed in text format after each step. Preferably, the text entries are offered by a menu controlled computer. The menu limits the choice of text entries to the entries which can be combined with the coding specifications. The coding specifications correspond to the specifications of the ALERT C protocol for TMC messages. The current data volume of the code is displayed by the computer.
