Abstract (en)

[origin: WO9702833A1] A pharmaceutical formulation comprising a growth hormone and a peptide comprising at least one basic amino acid residue and at least one acid amino acid residue as additive or buffering substance shows a very high stability against deamidation, oxidation and cleavage of peptide bonds. The stability of the product allows for the storing and shipment thereof in a lyophilized state or in the form of a dissolved or re-dissolved formulation at ambient temperature.
