Abstract (en)  
[origin: DE19525168A1] In a paddle wheel for laying out folded products from a folding device, the aim is to match the paddle wheel pockets to the particular thickness of the printed products to be laid out. According to the invention, this is done by arranging a guide strip along each paddle, the strip at its end close to the pocket floor being capable of rising and falling along its entire width under the action of a drive.
