Abstract (en)

[origin: DE19618893A1] The invention concerns a method and device for controlling a motor vehicle internal combustion engine, according to which a desired torque value is predetermined and divided into at least two desired values, which are used to adjust the filling of the internal combustion engine, and at least one further performance parameter which brings about a rapid variation in torque, the at least two desired values having different values in at least one operating state.
