Abstract (en)
[origin: EP0838251A1] The combined roller and ice skate comprises a boot (5) with a supple heel and a skate (1) formed by a support plate (2) with several rollers (4) or a blade. A rigid rear stirrup (3) engages the bottom of the wearer's leg. The coupling-interface between the boot and the plate comprises a fastening hook on the plate allowing automatic fitting of the boot by clipping boot sole (8) into an anchoring zone. The rigid stirrup which pivots relative to the plate has an internal shape complementary to the external shape of the heel.
