Abstract (en)

[origin: EP0838386A1] The vehicle has a body (6,7) and at least one bogie (10,11) formed as drive bogie or running bogie. The bogie is a single-axle one and has spring arrangements (9,13) to support the body on the guide section (17,22) between the wheels. The guide section is movably coupled to the body via a guide unit (19). The guide unit has two or more relatively offset rolling motion support elements (18). These are positioned between guide section and body, and are offset in longitudinal vehicle direction, relative to the spring arrangement.
