Abstract (en)  
[origin: EP0838567A1] The electrically controlled lock has a magnetic lever (7) which can rest in contact with an electrically activatable holding magnet and which can be moved by external forces. The door (3) carries a closure hook (4) which protrudes into the lock (1) mounted in the frame, in which it is held by a rotatable door blocking device (5). The lock has a slider (2) which rests in contact with the container door and which controls a transverse slider (6) which moves both the door blocking device and the magnetic lever.
