Abstract (en)

[origin: EP0838573A1] The housing (12) with side opening (22) contains a rotarily mounted blind (14) connected to a shaft (40). Two facing and spaced apart flanges (42,44) have inner surfaces forming the flanks (46,48) of a peripheral groove (50). Part of the blind's periphery is enclosed by the housing wall (26). The other part faces the opening. A flexible pull (18) lies in the groove and has two stringers (18a,b) leading out through the opening. The peripheral groove has radially outward-open compartments (52) for the pulls.
