Abstract (en)
[origin: EP0838577A1] The system has an oil sump (2) with pump to drive a circuit to supply oil to the engine. It also has an oil cooler (11), connected to the oil circuit and to a cooling medium circuit driven by a cooling medium pump (101). The oil circuit is connected to an oil filter (12). The fluid connections between oil module (1) and engine, and between the module components, are formed by pipes and/or connections integrated in the module. The side (3) of the oil sump next to the end face of the engine is open, and is closed by the engine when fitted.
