Abstract (en)  
A radiator, specifically a household radiator, of the type consisting of a plurality of metal heating elements, each one formed by manifold elements and at least one radiant element, which are obtained separately and then connected together. According to the invention, the radiant element (6) is connected with the manifold elements (5) by a male-female coupling and mechanical means (17,22) are provided, which prevent the female acting element (23 or 15) to withdraw from the male acting element (15 or 23). <IMAGE>
