Abstract (en)

[origin: WO9635322A1] A combined rake and pick-up device comprising a handle (1) and a rake head (2) attached to the bottom end of the handle. The rake head (2) includes resilient tines (4) whose free ends are angled to form prongs (5). The device also includes a press head (9) which can be swung relative to the rake head (32) so as to firmly grip raked material (13) between the press head (9) and the rake head (2). The inventive device is mainly characterized in that the press head (9) is attached to the handle (1) so as to enable raked material (13) to be gripped between the press head and the rear side of the rake head (2). The press head (9) will preferably have the form of a second rake-like head which includes resilient tines (11) having prongs (12) which face towards the rear side of the first rake head (2).
