Abstract (en)
A sports shoe with improved foot insertion, comprising a semirigid external upper (2) and an internal soft padding (3). At the rear region of the padding affected by the heel during foot insertion an insert (8) is provided which is stably connected to the padding and is made of a material having a lower friction coefficient than the surrounding material of which the padding (3) is made, the insert facilitating foot insertion by assisting the sliding of the heel. <IMAGE>
