Abstract (en)
The present invention relates to an improved device for mixing paints in paint vessels and the like, comprising a holding construction (1), inside which is rotatably supported a horizontal pin (3), in turn supporting a pulley (4) coupled to driving means (6) for turning the pulley (4) about the horizontal pin. An angular arm (10) coupled to the pulley (4) and rotatably supporting a vertical pin (11) to which is coupled a paint vessel supporting plate (12) is moreover provided. The paint vessel supporting plate (12) is caused to turn by friction engaging it with an abutment surface. <IMAGE>
