Abstract (en)

[origin: EP0839709A2] The float comprises curved or V-shaped tubes (5), preferably serving as supports for a roof (4), are mounted by their ends to the top of the float and have a canister (8) of pressurised medium. One or more support hoses (1) beneath the V-shaped or curved tubes go under the float and are connected to them by means of a throttle or restoring valve (15). In the case of two support hoses , the lower support hose has a source of pressure medium (9). The hoses and float can be inflated at the same time.
