Abstract (en)
The disclosure relates to a device for preventing, or at least impeding the theft of computers (3) or parts thereof, comprising an adapter and a bracket (2). The adapter is securable on the casing (4) of the computer (3), preferably its underside. The bracket (2) is securable in an object such as a floor, a wall or an item of furniture. The adapter and the bracket have mutually interconnectible engagement means (19). The bracket (2) has side walls (5) which are disposed to follow the walls (6) of the casing (4) which connect to opposing edges of the anchorage surface of the computer. The side walls (5) of the bracket (2) have, at their one end, arrest portions (11) angled towards one another and which, in an adapter disposed in the bracket with casing, are disposed to prevent access to at least certain parts of adjacent corner edge regions of the casing. <IMAGE>
