Abstract (en)

[origin: EP0840068A2] The appliance has a long narrow housing (2) of small depth. It has two stationary support plates (25,26) and two slides (28,29), formed by slotted or perforated plates (36,37). The support panels are fastened to the inside of two longitudinal housing frame sides (4), via longitudinal edge profiles with complementary undercuts (17,18). The slides are held by pressure between other edge profiles of the support panels. All panels are held and secured to each other and between the undercuts, by the elastic tension active between the slides.
