Abstract (en)

[origin: EP0841032A2] The pane (2) is supported by a bracket (3) equipped with a rotary adjusting component (12, 25). A fixing device (27) on the component is mounted eccentrically in relation to the latter's axis of rotation. The degree of eccentricity can be adjusted, and the component can consist of a rotary disc, which can contain an elongated hole to accommodate the device. Two discs can be provided, eccentric to each other, with the second one equipped with the fixing device.
