Abstract (en)
[origin: EP0841529A2] The layer (5) can be formed in the barrel of the gun and a first layer of the casing. There can be several concentric casing layers round the barrel, and which are formed by windings with the layer on the inside surface. One at least of the casing layers can be divided into individual segments in the lengthwise direction of the barrel. These segments are set at intervals round the periphery.
