Abstract (en)
[origin: EP0841726A2] The connector has a plug housing (1) with a foot (1a) and a projecting sleeve (1b), enclosing base contact pins (2) and a pair of phase reversal pins (3), supported by a rotatable insert (4) incorporated in the foot, allowing the position of the phase pins relative to the base pins to be reversed by rotation through 180 degrees. The position of the rotatable insert relative to the foot is secured by a spring arm (6) in 2 defined angular positions, by cooperation of locking noses with locking openings provided by the foot.
