Abstract (en)

[origin: EP0842791A2] The former comprises at least two laminating plates (10), between which the card layers are laminated under application of heat and pressure. At least one of the plates has a press (14), which is projects on the plate so that the surface structure to be produced on the card does not project above the surrounding surface level. The press may be integral to the plates. The structure may be in the form of a cylindrical or spherical lens, or a combination of the two.
