Abstract (en)
[origin: EP0843127A2] The luminaire system comprises a general support (1) on which an illumination lamp is placed, assembled on a connection device (4) attached to said support (1), on which a series of reflectors (3) are in turn assembled, arranged parallel to the illumination lamp, said reflectors (3) being associated to rotating devices (2) which mesh with a rod or axis (8) activated by means of an external element (6), complemented with fixed reflectors (5-5'), all this in such a manner that the user can easily modify the direction of the light reflected on the reflectors (3), before, during and after the installation "in situ" of the luminaire. The variation in the direction of the light reflected, is conducted by means of the activation of rotating devices (2) to which the reflectors (3) are associated. <IMAGE>
