Abstract (en)
[origin: EP0843134A1] Heating apparatus (1), comprising a storage vessel (2) and a heat exchanger (3) extending in the storage vessel (2), which heat exchanger (3) comprises a burner space (19) and, connecting thereto, a heat-exchanging part (21) and is provided with gas mixture-supply means for a gas-air mixture (16) to burner means (17) disposed in the burner space and flue gas-discharge means, wherein the storage vessel (2) comprises water-supply means (7) and water-discharge means (10), wherein the heat exchanger (3) is substantially manufactured through casting from light metal and the vessel is substantially manufactured from sheet material, wherein the gas mixture-supply means are disposed adjacent a first end (15) of the heat exchanger and the flue gas-discharge means are disposed adjacent a second end (23) spaced from the first end (15), wherein the first end of the heat exchanger (3) is located adjacent the top side of the storage vessel in a first wall part of the storage vessel (2) and the second end (23) is located adjacent a bottom side of the storage vessel (2) in a second sheet part, and wherein the storage vessel (2) is adapted for storing and feeding through water for use in a space-heating circuit (9).
