Abstract (en)

[origin: EP0843331A1] The Manual and automatic electromagnetic Command has a swinging arm (20) which is near to an electromagnetic coil (16) fixed to a housing (14). The arm moves opening and closing contacts through mechanical connections. An override lever (49) can switch the contacts manually. The moving arm has a two position shutter (76) arrangement with an upper section (78) which is viewable through a hole in the top of the command system, allowing the switch state to be viewed.
