Abstract (en)
[origin: WO9707063A1] A biological and mechanical filtration system for use in the treatment of water used in recirculating systems, such as in the aquaculture, aquarium and water purification industries. The filtration medium comprises a plurality of massed, randomly disposed hollow cylindrical or tubular elements, ideally having a specific gravity of less than 1.0, with each element having a ratio of length to diameter of about 1.5:1.
