Abstract (en)

[origin: EP0843975A1] The appliance comprises a protective suit (1,2,3) enclosing the wearer's body, and ventilated by a ventilator. The exterior of the ventilated area (9) is covered by a thermally insulated layer (10). Perforated tubing is contained in the ventilated area, which consists of two flexible layers of material (11,12) held apart by spacer-arms (13). A hood (3) with connection to the ventilator has a transparent, preferably perforated pane (6) over the face area. Gloves have a thermally insulated layer over the back of the hands, and are permeable to air on the palms-side. The fan driven by an electric motor is contained in a small, portable container (4).
