Abstract (en)

[origin: EP0844158A1] The loading and unloading device has load-bearing platforms (4) in the train, on which the load units are carried. The platforms have load handing devices (6) outside the train zone for the loading and unloading of cargo. The cargo can be loaded or unloaded by raising and lowering either the train itself or the load handing devices. There may be wheels or rollers (5) either side of the load-bearing platforms. The load handling device may consist of a rail, possibly projecting into the running path of the train.
