Abstract (en)
[origin: EP0844201A1] The conveyor (2) feeds the printed products (1) along a front conveyor-section (3) in the form of a stack (4), and along a rear conveyor section (5) as a bar (6). Between the stack and bar is a loosening area (7) with a sensor (8) detecting the position of the stack and the forward thrust of the printed products. The rear conveyor section has a continuously forward moving conveyor element (9) controlled by a intermittently forward moving conveyor element (10) on the front conveyor section. The intermittently moving conveyor element is connected to a transmitter (11) with a control (12) for the drive mechanism (13) of the continuously operating conveyor element.
