Abstract (en)
[origin: EP0844332A1] The issue point (15) of a lower or upper passage (14) coming from a second street (2,1) to the first street (1) is further remote from the crossing centre than the entry (4) of the lower or upper guide (5) beginning on the one street. Preferably, the lower or upper passage coming from the second street crosses under or over the traffic lane to the entry of the lower or upper passage (5,14) beginning on the first street. For the entry of the lower or upper passage to the first street a traffic line (3a,8a) is provided to the middle of the street. The exit (6) of the lower or upper passage leads to an additional outer traffic lane (7) on the second street (2).
