Abstract (en)
[origin: EP0844340A1] The box comprises side walls in the installation position which run vertically to the surface of the installation wall and commonly define with the base a one-sided open inner space. At least one through passage is provided for a water feed conduit. Fixture devices are available for a sanitary fitting to be fitted in the inner space. On the outer surface of the side walls a ring-shaped sleeve (23) of elastic material is arranged. A sealing area (24) displaceably locates on the side walls. A flange area (25) is formed in one piece with the sealing area and in the installation position extends somewhat parallel to the outer surface of the installation wall and is tightly fixable to the covering of the installation wall facing the room interior.
