Abstract (en)  
The invention relates to a wedge comprising an annular peripheral wall (1) wherein partition walls (2,3) are provided between respective sides of the peripheral wall, said partition walls (2,3) dividing the space within the peripheral wall into mutually separated compartments (6,7,8), wherein a number of the compartments have a delimiting surface (4) at the peripheral edge of the partition walls (2,3) and optionally portions of the adjacent peripheral wall (1), said delimiting surface (4) serving, at the surface thereof facing away from the respective compartment, as a support surface for an object arranged on the wedge, wherein the wedge is characterised in that at least a portion of the remaining, delimited compartments between the partition walls (2,3) and optionally portions of the adjacent peripheral wall (1) are provided with a delimitation (5) at a distance from the respective peripheral edges of said walls. <IMAGE>
