Abstract (en)

The key grip or handle (2) has an attached signal transmission and reception unit with the attachment device provided with flexible grooves (13) via which the key grip can be displaced by exerting a force on the grip in the direction of or transverse to the shaft axis. The grip has an approximately U-shaped holding body which contains the attachment device and in which a grip housing is plug-connected to the transmitter and receiver unit.

Abstract (de)

Der Griff (2) eines Zündschlüssels (1) ist mittels einer elastischen Halterung (7) an dem Schlüsselschaft (3) befestigt. Wenn eine Kraft auf den Griff (2) einwirkt, so wird der Griff infolge der elastischen Befestigung aus seiner Ruhelage ausgelenkt. Bei zu großer Krafteinwirkung bricht die elastische Halterung (7). Somit wird die Gefahr von Knieverletzungen des Fahrers infolge eines Unfalls vermindert. <IMAGE>
