Abstract (en)
[origin: EP0844350A2] The two hinge parts (10, 20) are pivotably connected to one another by a hinge bolt (6) engaging in cylindrical recesses (9, 8) of both hinge parts and forming the hinge axis (A). An outer bush (19) has a cylindrical longitudinal recess (18) eccentric to the axis of its cylindrical outer periphery (21) and with a base (24) at one end. In the outer bush is an inner bush (11), which has a cylindrical longitudinal recess (12) eccentric to the axis of its cylindrical outer periphery (13) and at the corresponding end also has a base (15). It is intended to accommodate the hinge bolt (6) in the longitudinal recess (12).
