Abstract (en)
[origin: DE19648710C1] The plug connector has a connector housing and a plug (11) with three contact blades (12, 13, 14). There are also cable terminals (39) and at least one electric component between one of the contact blades and one of the terminals. A first contact blade (12) is connected by means of a first electric conductor element (36) to a first cable terminal (39). A second contact blade (13) is connected, by means of a second electric conductor element (41), with a second cable terminal (44). A third contact blade (14) is joined by a third electric conductor element (45) and via a micro-temperature fuse (19) connected in series with a helical resistor (20), with the second electric conductor element (41). A terminal cable (17, 18) leading to the electric load (3) may be soldered to each of the first and the second cable terminal (39, 44). A protective frame (51) may be attached to the connector housing (23), and surrounds the fuse (19) and the resistor (20). The connector housing (23) is preferably made of plastic and may have an S-shaped holding tongue for fastening to a carrier.
