Abstract (en)

[origin: EP0844704A2] The manufacturing method has at least 2 individual line wires clamped between 2 spaced holders (11) in a twisting device, with subsequent rotation of at least one of these holders so that the line wires are twisted together, while maintaining a given line wire tension. The rotated holder may be mounted on a carriage which can be displaced axially relative to the twisting path between the spaced holders during the rotation.
