Abstract (en)

There is provided a heat resistant adiabatic bag which has an excellent adiabatic property against an increase of ambient temperature, which is useful and which has an excellent temperature insulating property even when the ambient temperature drops. The heat resistant adiabatic bag comprises an outer bag made of a laminated sheet which has heat resistant and adiabatic properties and which shuts off aeration and an inner bag made of a laminated sheet which has heat resistant and adiabatic properties and which shuts off aeration. The inner bag may be inserted to the outer bag almost without any gap therebetween. A sealing sheet made of low fusion point resin is provided corresponding to air permeating points of at least the outer bag or the inner bag. <IMAGE>
