Abstract (en)

Activators for (preferably inorganic) peroxy compounds in aqueous detergent solutions for hard surfaces, especially crockery, comprise alkali or ammonium tungstate and/or molybdate compounds. Also claimed are (i) the use of these compounds in detergent solutions for cleaning hard surfaces, especially crockery, for bleaching coloured stains, (ii) a cleaning method for hard surfaces, especially crockery, using these aqueous detergent solutions which may also contain other cleaning agents, (iii) detergents for cleaning hard surfaces, containing combinations of these compounds with polycarboxylates and/or enzymes and (iv) the same detergents for cleaning crockery, especially for use in dishwashers.

Abstract (de)

Die Oxidations- und Bleichwirkung anorganischer Persauerstoffverbindungen bei niedrigen Temperaturen, insbesondere bei der Reinigung harter Oberflächen, sollte verbessert werden. Dies gelang im wesentlichen durch den Einsatz von Wolframat und/oder Molybdat. Mittel zur insbesondere maschinellen Reinigung von Geschirr enthalten etwa 0,01 Gew.-% bis 5 Gew.-% eines derartigen bleichverstärkenden Wirkstoffs in Kombination mit Polycarboxylaten und/oder Enzymen.
