Abstract (en)
[origin: EP0845568A2] The hinge comprises two hinge halves fixable to door arrangement, door or door column, each with two spaced apart aligned hinge eyelets. The two hinge halves (1, 2) are formed by a folded plate material section and at least in the area of the hinge axis have a U-shaped profile cross-section form. The hinge eyelets (3, 4) are arranged in the profile arms of the U-shaped profile cross-section form of the two hinge halves. The two hinge halves also have a device for their counterposed securing both in the closed and also in a further pivot position corresponding to the partially opened position of the door. The two hinge halves engage over one another with their profile base and the hinge pin stubs (11) are arranged in the hinge eyelets of the engaging hinge half.
