Abstract (en)
Automatic signalling device at fixed intervals, comprising a timer (3) connected to an acoustic and/or optical device which generates a warning signal at a predetermined frequency, the signaling device being provided with an electric power source, said components being housed in a plastic material body (1) having a laminar stretcher in right rectangular configuration, having on one of its sides a loop or eyelet (2) through which a cord can be passed, said body being configurable as the cover of a box (6) of similar size and optionally being provided with a selector (5) for selecting the hour interval, and a casing (7) accessible for changing the batteries. <IMAGE>
