Abstract (en)
The present invention relates to a tablet dispensing device (10) being liquid permeable. The device comprises a first member (11) an opposing second member (14) and connecting means (12). The first member and the second member are substantially rigid. The first member and the second member are connected to the connecting means, the connecting means being flexible so that the distance between the first member and the second member is variable allowing the first and second members to come into close proximity. The first member and the second member are movable in a substantial free manner from each other when the dispensing device is placed in a laundry washing machine. <IMAGE>
