Abstract (en)

The member comprises two sheet metal edge strips (11,12) and a synthetic rubber middle strip (30) joined to the edge strips by vulcanisation. At one end of the expansion member, the edge strips are joined together to form a zero movement point. Along the synthetic rubber strip, one edge strip (12) is overlapped over the other to form a protective covering. Preferably, one (11) of the strips has a cut-out in the area of the zero movement point and the other edge strip is welded to the edge of the cut-out.

Abstract (de)

Ein Dilatationselement zur Fugenüberbrückung an Bauwerken besteht aus zwei Blechrandstreifen (11, 12; 21, 22; 31, 32), die getrennt hergestellt und im Bereich (18; 25; 35) eines Bewegungsn Nullpunkts dicht miteinander verbunden sind. An die Unterseite der Blechrandstreifen (11, 12; 21, 22; 31, 32) ist ein Kunstgummimittelstreifen (30) an vulkanisiert. Oberhalb des Kunstgummimittelstreifens (30) überlappen die Blechrandstreifen (11, 12; 21, 22; 31, 32) einander zur Bildung einer Schutzabdeckung (16; 26; 36) für den Kunstgummimittelstreifen (30). <IMAGE>
