Abstract (en)
[origin: GB2303635A] A detergent composition in compacted solid form contains (a) an organo diphosphonate crystal growth inhibitor; and (b) an alkalinity system comprising alkaline salts selected from the group consisting of alkali and alkaline earth carbonates, bicarbonates, hydroxides and silicates wherein at least part of the alkalinity system comprises particulate alkaline salts coated with an organic binder and the weight ratio of organic binder to alkalinity system in the detergent composition is from 1: 100 to 1:1. The coating of the alkaline salts improves the strength and hardness of the solid form while assisting in the disintegration of the solid form in the wash.
