Abstract (en)

[origin: DE19531690A1] Solid and compacted multiple component mixtures of washing and cleaning products, in particular textile washing products, consist at least for the most part of pourable, bulk mixtures in the coarse particle range. These multiple component mixtures are characterised in that the coarse particle substance is shaped so as to form figures with a plate-like or flake-like structure. The ratio between the largest length or width (L) to the average plate thickness (1) is higher than 1.2, preferably at least 1.5. Also disclosed is a process for producing these figuratively designed multiple component mixtures, as well as corresponding multiple component, abrasion-resistant and pourable bulk washing and cleaning products, in particular textile washing products, that are free from dust and fine particles.
