Abstract (en)

[origin: WO9714855A1] In accordance with a method for mounting decking units (6) forming part of a building construction (1) and being in the form of chipboard or gypsum wallboard or the like, on a structure framework (2) likewise forming part of the construction with the aid of a fastener means (7), said fastener means is securely applied, prior to the mounting proper, on the decking units (6) oppositely the framework (2) or the reverse, the fastener means in the final mounting operation being placed in interconnecting engagement relationship with the opposite one of the decking units (6) and the structure framework (2). The structure framework (2) comprises a number of essentially parallel, spaced-apart vertical steel battens (3) and upper and lower horizontal steel battens (4, 5), the chipboards or gypsum wallboards completely or partly covering the structure framework (2), at least on one side thereof and in turn being wholly or partly applicable to the battens (3, 4, 5) with the aid of fastener means (7), the latter extending at least along the major portion of the battens (3, 4, 5) and in the area adjacent the edges of the boards.
