Abstract (en)
[origin: WO9708592A1] The disclosure pertains to a method by which an elastomer is applied to a model (1) with relief marks to be reproduced; the purpose of the elastomer once set is to form a mould membrane (14) and incorporate within its own material the shape of the marks on the model. The mould membrane is then separated from the model and filled with a setting material, and the mould membrane is applied to a support in order to transfer the marks after preliminary pasting.
