Abstract (en)

[origin: EP0847875A1] The binder (1) consists of a cover comprising a spine (2) and two sides (3) which are made in the form of hollow panels which can be joined by clips or hinges or made in one piece with strips of material (9) between them which allow the sections to be folded. The binder can be made in a variety of configurations, e.g. with a fastener to hold the free ends of the side panels together, and is made e.g. from polypropylene or polyethylene by an extrusion/blowing process.
