Abstract (en)

[origin: EP0847951A2] To provide a doffing system for a texturing machine that controls yarn-breakage packages. This invention has a detection means for detecting the size of a package 10 and identifies the packages 10 as either a large or a small package during doffing based on the detected size. Based on this identification, packages of inappropriate sizes for the subsequent process can be removed. <IMAGE>
