Abstract (en)  
[origin: EP0848124A2] A pivot arm (35) controls lever arm (52) acting on a tumbler (37) association with the locking bolt (36) of a lock which can be withdrawn jointly with a follower-operated latch bolt (15). The arm is formed by a follower-operated connecting rod drive lever acting on a connecting rod connecting bar (4). The locking bolt is locked by displacement of the bar. Preferably, the pivot arm forms a control cam (50) which acts on a projection (51) on the lever arm to lift the tumbler. The pivot arm is driven in the opposite direction to the follower rotation.
