Abstract (en)

[origin: EP0848136A1] The system consists of a central panel (10) with dimensions to fit the opening, an inflatable tubular surround (20), and a frame (30) which is fixed to the edge of the panel and acts as a guide and support for the tube. The frame has an H-shaped cross-section, with a channel in one side to receive the edges of the panel and a divergent channel in the other to engage with the inflatable tube. The frame can be made e.g. in one piece from aluminium, while the tube is made e.g. from butyl rubber with an outer foam rubber covering and corner members (41) to prevent any gaps.
