Abstract (en)

The system uses target signatures of a marker beam for target recognition and guidance. The components for target recognition and flight guidance are separated from each other as transmitters at the target and receivers at the flying body or missile (5). The markers (14) carrying the signature transmitters (1) are deployed in large numbers in a region to be barred and are activated by the target to be destroyed. The first continuous radio signals from a position transmitter (2) start the missile roughly towards the target and move the markers simultaneously towards the target using an acceleration device (14). The markers adhere (12) to the target and maintain radio communications with the directional receiver on the missile until impact.

Abstract (de)

Die Erfindung bezieht sich auf ein System zur Endphasen-Führung gelenkter autonomer Lenkflugkörper (5), bestehend aus einer Markierungseinheit (14) mit Sensor (1), Signatursender (2) und Anheftvorrichtung (12) an das Ziel sowie kooperierender Peilempfänger (4) im Lenkflugkörper (5). Ausführungsbeispiele sind beschrieben und erläutert. <IMAGE>
